# FLEETUP

Alert

FleetUp integration for Alert

Keep your rental business on track. FleetUp's rental-friendly software allows you to see the real-time status of your assets and vehicles.

FleetUp and Alert

Built for rental companies who want to offer a premium customer support service, FleetUp's Alert integration puts your dispatch, your drivers, and your customers on the same page.

Beat the competition by creating a first-class customer experience. Send clients automated GPS data and arrival time notifications.

Share live ETA and real-time shipment data with customers

By using the FleetUp App, you can send customers automated messages the moment their shipments are on the way.

How to create automated notifications

1. Create driver routes on your Alert platform.

2. Have drivers download the FleetUp Mobile App on their Android or iOS phone.

3. When drivers start work, they log into FleetUp Mobile and find their route.

4. When drivers are ready to head to the first destination, they select its address and click "Start." FleetUp automatically sends location and ETA data to the client.

5. When drivers complete a delivery, they click "Complete." Then, they continue to the next address and repeat the process until their route is finished.
